## Funzionamento Ciclone e Filtro Cyclone and Filter operation

Il **Ciclone** tramite forza centrifuga seleziona e separa le polveri che si creano durante il ciclo di sabbiatura e pallinatura. Il **Filtro** a cartuccia certificato Mod. SE/1 trattiene le polveri di lavorazione e garantisce un ottimo equilibrio dell'impianto.

*Through the centrifugal force, the cyclone selects and separates the dust that is created during the sandblasting and shot-peening cycle. The certified cartridge filter Mod. SE/1 retains the processing dust and ensures an excellent balance of the sandblasting system.*
